## 1. Read first and then

The proper and safe operation of the device assumes that the Operating Instructions are read and the safety warnings given in the various sections are observed.

The device should only be handled by appropriately trained personnel who are familiar within and authorised to work in electrical installations.
2. Scope of Supply

(1) Signal Isolator
(2) Operating Instructions
3. Variants

| Auxiliary supply voltage |
| :--- |
| $60 \ldots . .300 \mathrm{VAC} / \mathrm{DC}$ |
| $20 \ldots . \ldots 0 \mathrm{VAC} / 20 \ldots 60 \mathrm{~V}$ DC |

## 4. Brief description

The purpose of the device is to electrically isolate input, outputs and power supply. The isolator fulfills all requirements and regulation concerning electromagnetic compatibility EMC and safety (IEC61326-1 and IEC 61010-1:2010). The device has one input and provides two independent outputs in an extremely small space.

## 5. Overview of the parts

Fig. 1 shows those parts of the device which are used for mounting, electrical connections and other operations described in the Operating instructions.

Fig. 1

## 6. Configuration

The device inputs and outputs can be configured using slide switches.
Table $A$ and $B$ contains the switch position information for the configuration of input and output-1/output-2 respectively. When ever configuration is changed output-1 and output-2 one adjustment must be accomplished using "Z" (Zero) and "S" (Span) potentiometers provided on front panel separately for both the outputs i.e. output-1 and output-2
Refer Fig. 1 Front panel view of device
TABLEA: INPUT RANGE SELECTION

| Input | S1 | S2 | S3 | S4 |
| :---: | :---: | :---: | :---: | :---: |
| $0 \ldots 20 \mathrm{~mA}$ | OFF | OFF | OFF | OFF |
| $0 \ldots 10 \mathrm{~mA}$ | OFF | OFF | OFF | ON |
| $0 \ldots 24 \mathrm{~mA}$ | OFF | OFF | ON | OFF |
| $4 \ldots 20 \mathrm{~mA}$ | OFF | OFF | ON | ON |
| $0 \ldots 10 \mathrm{~V}$ | OFF | ON | OFF | OFF |
| $0 \ldots . .12 \mathrm{~V}$ | OFF | ON | OFF | ON |
| $0 \ldots 5 \mathrm{~V}$ | OFF | ON | ON | OFF |
| $\ldots \ldots 5 \mathrm{~V}$ | OFF | ON | ON | ON |

TABLE B: O/P1 \& O/P2 RANGE SELECTION

| Output | S1 \& S2 | S3 | S4 |
| :---: | :---: | :---: | :---: |
| $0 \ldots 10 \mathrm{~mA}$ | OFF | OFF | OFF |
| $0 \ldots 20 \mathrm{~mA}$ | OFF | OFF | ON |
| $2 \ldots 10 \mathrm{~mA}$ | OFF | ON | OFF |
| $4 \ldots 20 \mathrm{~mA}$ | OFF | ON | ON |
| $0 \ldots 5 \mathrm{~V}$ | ON | OFF | OFF |
| $0 \ldots 10 \mathrm{~V}$ | ON | OFF | ON |
| $1 \ldots 5 \mathrm{~V}$ | ON | ON | OFF |
| $2 \ldots 10 \mathrm{~V}$ | ON | ON | ON |

7. Technical Data
Measuring Input ..... $\Theta$
DC Current :
Standard ranges :
1) $0-20 \mathrm{~mA}$
2) $0-10 \mathrm{~mA}$
3) $4-20 \mathrm{~mA}$
$R_{i} \leq 15.5 \Omega$
4) $0-24 \mathrm{~mA}$
DC Voltage :
Standard ranges:
$\left.\begin{array}{l}\text { 1) } 0-12 \mathrm{~V} \\ \text { 2) } 0-10 \mathrm{~V}\end{array}\right\} \quad R_{l} \geq 100 \mathrm{~K} \Omega$
$\left.\begin{array}{l}\text { 3) } 0-5 \mathrm{~V} \\ \text { 4) } 1-5 \mathrm{~V}\end{array}\right\} R_{i} \geq 60 \mathrm{~K} \Omega$
Measuring outputs $1 \& 2 \bigcirc$
DC current: 1) $2 . .10 \mathrm{~mA}$

$$

$-40 . . .70^{\circ} \mathrm{C}$
$\leq 75 \%$

## 8. Mounting

The Isolator can be mounted on a top-hat rail.

Fig. 2 Top-hat rail Mounting

As the front of the enclosure conforms to IP 40. The terminals of the product should be protected from liquids. Transducer should be mounted in a reasonably stable ambient temperature and where the operating temperature is within the range -10 to $55^{\circ} \mathrm{C}$. Vibration should be kept to a minimum and the product should not be mounted where it will be subjected to excessive direct sunlight.

## Caution

1. In the interest of safety and functionality this product must be installed by qualified engineer, abiding by any local regulations.
2. Voltages dangerous to human life are present at some of the terminal connections of this unit. Ensure that all supplies are de-energised before attempting any connection or disconnection.
3. This product do not have internal fuses therefore external fuses must be used to ensure safety under fault conditions.

## 9. Electrical Connections

Input connections are made directly to screw-type terminals with indirect wire pressure. Choice of cable should meet local regulations. Terminal for Current inputs will accept up to $\leq 4.0 \mathrm{~mm}^{2}$ single wire or $2 \times 2.5 \mathrm{~mm}^{2}$ fine wire.

Make sure that the cables are not live when making the connections!
The 230 V power supply is potentially
dangerous !

Note that, ...
...the data required to perform the electrical insulation task agree with the data on the nameplate of the Isolator $\mapsto$ input $E, \Theta$ output $A 1$ \& $A 2$ and $\rightarrow$ ○ power supply H!)
...the total loop resistance connected to the output (receiver plus leads) does not exceed the maximum permissible value $R_{\text {ext }}$ max. See "Measuring Output" in sec. 7. Technical data" for the maximum values of $R_{\text {ex }}$ !
...the input and output cables should be twisted pairs and run as far as possible away from heavy current cables!
In all other respects, observe all local regulations when selecting the type of electrical cable and installing them !

| Connection | Terminal details |  |
| :--- | :---: | :---: |
| Measuring Current input | + | - |
| A)0....24mA | 11 | 10 |
| B) $4 . . .20 \mathrm{~mA}$ | 12 | 10 |
| C) $0 . .20 \mathrm{~mA}$ | 13 | 10 |
| D)0....10mA | 14 | 10 |
| Measuring Voltage input |  |  |
| A)1...5V | 15 | 10 |
| B)0...5V | 16 | 10 |
| C)0...12V | 17 | 10 |
| D)0....10V | 18 | 10 |
| Measuring output 1 | 5 | 6 |
| Measuring output 2 | 8 | 9 |
| Auxiliary supply | 1 | 2 |

Fig. 3 Front View of Device for electrical Connections

## 10. Commissioning

Switch on the measuring inputs and the power supply. The green LED lights continuously after switching on.

## 11. Maintenance

No maintenance is required.
