THETA- M

PROGRAMMABLE MULTI-TRANSDUCER

APPLICATION :

The **THETA -** M transducer is used to measure and convert parameter of Three-phase 3W/4W AC power network with balanced or unbalanced system.

It ensures that the measurement and conversion of measured values into standard analog current signals. Relay outputs signal the overflow of the selected quantities, and the pulse output can be used for the consumption monitoring of the 3-phase active energy.

Fig. 1 THETA - M

SALIENT FEATURES :

- True RMS measurement.
- Fully **onsite programmable** input PT & CT ratio.
- Detection and signaling of incorrect phase sequence.
- THD Measurement.
- Programmable parameters through the **RS-485** interface or USB when using the free **eCon** configuration software
- **Onsite selectable analog output range (0...20mA/4...20mA/-20...+20mA).**
- Fast and easy installation on DIN RAIL or onto a wall or in a panel using optional screw hole bracket.
- Connection Terminal : Conventional Screw type.

PRODUCT FEATURES:

Measuring Input:
AC Voltage/Current input signal, sine wave or distorted wave form.

Analog Output :
Analog output which can be set in between -20mA....20mA onsite. Admissible overflow on analog output: 20% of lower and upper value.

Programmable PT,CT Ratio:
The Transducer can be programmed onsite using through RS 485 or USB port..

LED Indication:
LED indication for power on,RS485 transmission, reception and alarm switching .

RS485 Communication:
RS485 communication is available. For reading measured parameter & onsite configuration of input/output.

USB Communication:
RS485 communication is available. For reading measured parameter & onsite configuration of input/output.

Energy Measurement:
Tetra quadratic energy measurement (Ep+, Ep-, EqL, Eqc).

Mean Active Power :
Measurement of 15, 30 or 60 minutes' mean active power (synchronization by an internal clock or a walking window) with the archiving function of 1000 last samples.

Galvanic Isolation:
Transducer output signal are galvanically isolated from the input signal.

Pulse constant of OC type output:
5000-20000imp./KWh, independently on setting of ratios Ku,Ki

Alarm Indications:
The alarm indication can be set for measured input parameter.

PROGRAMMING

Programming of transducer

The eCon software is destined for the configuration of transducer. one must connect the transducer to a pc computer through the Rs485 converter ,if the communication will be performed using Rs485 interface or directly through the USB .
