## 1. APPLICATION

Meters of the N24 and N25 series are digital instruments destined for the measurement of d.c. voltage or d.c. current: uni or bipolar, temperature through J, K thermocouples, Pt100 resistance thermometers and for the measurement of a.c. voltage and a.c. current. A LED display (4 digits for N24 and 5 digits for N25 meter series) constitutes the readout field.
The eCon software is destined for the configuration of N24 and N25 meter series. One must connect the meter with the PC computer through the PD14 programmer.
Following parameters can be reprogrammed:

- thresholds of displayed overflows,
- precision of the displayed result (decimal point),
- measurement averaging time ,
- counting of indications (individual characteristic),
- automatic or manual compensation: cold junction temperature for measurements with thermocouples, or wire resistance for Pt100 measurements (only in N24T and N24S meters).
All meters are galvanically separated between the supply, measuring inputs and the programmer input
Protection grade from the frontal side: IP65.
Meter overall dimensions: $96 \times 48 \times 64 \mathrm{~mm}$ (with terminals).

## 2. METER SET

The set is composed of:

- Meter types: N24 or N25 ..... 1 pc
- User's manual. ..... 1 pc
- Clamps to fix in the panel ..... 4 pcs
- Seal ..... 1 pc

When unpacking the meter, please check whether the type and execution code on the data plate correspond to the order. If equipment is incomplete or appears to be damaged, file immediately a claim with the carrier and notify the sender at once.

## 3. BASIC REQUIREMENTS, OPERATIONAL SAFETY

In the safety service scope, the meter meets the requirements of the EN 61010-1 standard.
Meaning of the symbol:

## Caution: risk of hazard.

## Observations concerning the operational safety

- All operations concerning transport, installation, and commissioning as well as maintenance, must be carried out by qualified, skilled personnel, and national regulations for the prevention of accidents must be observed.
- The programming of N24 and N25 meter series parameters must be carried out after disconnecting measuring circuits
- Before switching the meter on, one must check the correctness of connections to the network.
- Do not connect the meter to the network through an autotransformer.
- Before removing the meter housing, one must switch the supply off and disconnect measuring circuits.
- The removal of the meter housing during the guarantee contract period may cause its cancellation.
- The meter fulfills requirements related to electromagnetic compatibility and can be used in the industrial electromagnetic environment
- When connecting the supply, one must remember that a switch or a circuit-breaker should be installed in the building. This switch should be located near the device, easy accessible by the operator, and suitably marked as an element switching the meter off.
- Non-authorized removal of the housing, inappropriate use, incorrect installation or operation, creates the risk of injury to personnel or meter damage.

For more detailed information, please study the User's Manual.

## 4. INSTALLATION

### 4.1. Fixing Way

The meter has separable strips with screw terminals which enable the connection of external wires of $2.5 \mathrm{~mm}^{2}$ cross-section. In execution for current measurement, the plug enables a permanent fixing to the socket by means of screws. The meter is adapted to be mounted in a panel by means of clamps, acc. to the fig. 1 .
One must prepare a hole of $92+0,6 \times 45+0,6 \mathrm{~mm}$ in the panel which the thickness should not exceed 6 mm .
The meter must be introduced from the panel front with disconnected supply voltage. Before the insertion into the panel, one must check the correct placement of the seal. After the insertion into the hole, fix the meter by means of clamps (fig.1).

## 5. SERVICE

### 5.1. Display Description

Fig. 8. Frontal panel

### 5.2. Messages after Switching the Supply on

After switching the supply on, the meter displays the meter name appropriate to the kind of measured signal: $n e^{\top} 4 \mathcal{E}$, $n e^{2} 5 E$. where $\boldsymbol{E}$. is the appropriate execution of the $\boldsymbol{S}, \boldsymbol{\varepsilon}, \boldsymbol{z}, \boldsymbol{h}$. meter and next, the program version in the shape $r$ x.xx - where $\mathrm{x} . \mathrm{xx}$ is the number of the current program version or the number of a custom-made execution. Till the time to obtain the required number of correct measurements (acc. to the table 1 - for N24S, N24T, N24H, N25S, N25T, N25H meters or acc. to the table $2-$ for $N 24 Z$ and $N 25 Z$ meters) the arithmetical mean value from until now measurements is displayed. The measurement of a value
from behind the measuring range causes the setting of the overflow and the beginning of the counting of correct measurements again.
The time is set by the manufacturer on 1 sec .
Table 1

| Averaging time | $0,5 \mathrm{~s}$ | 1 s | 3 s | 5 s | 10 s | 15 s | 20 s |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of averaged <br> measurements | 2 | 7 | 20 | 33 | 67 | 100 | 133 |
| Updating of the value <br> on the display | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ |

Table 2

| Averaging time | $0,5 \mathrm{~s}$ | 1 s | 3 s | 5 s | 10 s | 15 s | 30 s | 1 m | 2 m | 5 m | 7 m | 12 m | 15 m |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Number of averaged <br> measurements | 1 | 2 | 6 | 10 | 20 | 30 | 60 | 100 | 100 | 100 | 100 | 100 | 100 |
| Updating of the va- <br> lue on the display | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ | $0,5 \mathrm{~s}$ | $9,1 \mathrm{~s}$ |

In case of any error occurrence or exceeding of the range value, one of the message described in the section 6 will be displayed.

### 5.3. Meter Configuration using eCon software

The free delivered eCon software, available on the manufacturer's webpage, is destined for the N24 and N25 meter series configuration. The configuration user's manual for N24 and 25 meters using eCon software is also available on the manufacturer's webpage.
The PD14 programmer is required for the configuration.

## CAUTION!

The programming of meter parameters must be carried out when measuring circuits are switched off!

### 5.4. Manufacturer's Parameters of N24S and N25S Meters

Table 3

| Parameter description | Range/value <br> (N24/N25) | Manufacturer's <br> value N24S | Manufacturer's <br> value N25S |
| :--- | :---: | :---: | :---: |
| Decimal point | $0000,000.0,00.00$, <br> $0.000 / 00000,0000.0$, <br> $000.00,00.000$, <br> 0.0000 | 00.00 for U,I <br> unipolar; <br> 000.0 for U <br> bipolar; | 000.00 for U,I <br> unipolar; <br> 0000.0 for U <br> bipolar; |
| Averaging time | $0.5 \mathrm{~s} ; 1 \mathrm{~s} ; 3 \mathrm{~s} ; 5 \mathrm{~s} ;$ <br> $10 \mathrm{~s} ; 15 \mathrm{~s} ; 20 \mathrm{~s} ;$ | 1 s | 1 s |

## 6. ERROR CODES

After switching the meter to the network on, messages about errors can appear. Messages about errors and their reasons are presented below.

|  | Overflow of the upper value of programmed <br> indication range. In the option with Pt100, this <br> message also signals incorrect connections of <br> the wire to the terminal 4. |
| :--- | :--- |
|  | Overflow of the lower value of programmed <br> indication range. | | Loss of meter calibration values. In such a case, |
| :--- |
| one must contact the service workshop. |

## 7. TECHNICAL DATA

### 7.1. Technical Data of N24S and N25S Meters

Measuring range:
INPUTS:
Measuring range of voltage Un:
$-11 \mathrm{mV} \ldots-10 \mathrm{mV} \ldots 60 \mathrm{mV} \ldots 66 \mathrm{mV}$
$-66 \mathrm{mV} \ldots-60 \mathrm{mV} \ldots 60 \mathrm{mV} \ldots 66 \mathrm{mV}$
-0.5 V... 0 V... 10 V... 11 V
-11 V...-10 V... $10 \mathrm{~V} . . .11 \mathrm{~V}$
input resistance $>1 \mathrm{M} \Omega$

Measuring range of current In:
$-1 \mathrm{~mA} \ldots 0 \mathrm{~mA} \ldots 20 \mathrm{~mA} \ldots 22 \mathrm{~mA}$ input resistance $10 \Omega \pm 1 \%$
$3.6 \mathrm{~mA} . . .4 \mathrm{~mA} \ldots 20 \mathrm{~mA} \ldots 22 \mathrm{~mA}$ input resistance $10 \Omega \pm 1 \%$

## Basic error

(at manufacturer's settings): $\quad \pm$ ( $0.2 \%$ of the range +1 digit)

Output for supply external
transducers

## Sustained overload

Short duration overload (1 s):
$24 \mathrm{~V} \pm 5 \% 30 \mathrm{~mA}$
110\% Un, 110\% In
voltage input 10 Un
current input 5 In

### 7.2. Technical Data of N24T and N25T Meters

Measuring range:
INPUTS:
Pomiar temperatury Pt100:
$\left.\begin{array}{l}-50^{\circ} \mathrm{C} \ldots 150^{\circ} \mathrm{C} \\ -50^{\circ} \mathrm{C} \ldots 400^{\circ} \mathrm{C}\end{array}\right\}$ current flowing through the sensor $<300 \mu \mathrm{~A}$
Resistance of wires connecting the resistance:
$\leq 5 \Omega$ by wire for the automatic compensation
$\leq 10 \Omega$ by wire for the manual compensation
Temperature measurement
by thermocouple of $J$ type:
Temperature measurement
by thermocouple of K type:
$-50^{\circ} \mathrm{C} . . .1200^{\circ} \mathrm{C}$
$-50^{\circ} \mathrm{C} . .1370^{\circ} \mathrm{C}$

## Basic error

(at manufacturer's settings): $\quad \pm$ ( $0.2 \%$ of the range +1 digit)

## Additional errors in rated operating conditions:

- compensation of cold junction temperature changes
- compensation of wire resistance changes
Output for the supply
of external transducers
Short duration overload (1 s):
$\pm 0.2 \%$ of the range
$\pm 0.2 \%$ of the range

### 7.3. Technical Data of N24Z and N25Z meters

Measuring range:
INPUTS:
Measuring range of voltage Un:
1... $100 . . .120 \mathrm{~V}$ a.c.
2.5...250... 300 V a.c. $\}$ input resistance $>2 \mathrm{M} \Omega$
4... $400 . . .600 \mathrm{~V}$ a.c.

Measuring range of current In:
0.01...1...1,2 A a.c. input resistance $10 \mathrm{~m} \Omega \pm 10 \%$
0.05...5... 6 A a.c. input resistance $2 \mathrm{~m} \Omega \pm 10 \%$

Measurement of frequency 20... 500 Hz
(in voltage range 24... 480 V ) input resistance $>2 \mathrm{M} \Omega$
Basic error (at manufacturer's settings):

- voltage and current: $\pm$ ( $0.5 \%$ of the range +1 digit)
in frequency interval 20... 500 Hz
- frequency: $\quad \pm$ ( $0.02 \%$ of the range +1 digit)

Sustained overload
150\% Un (only for 400 V input),
120\% Un (for other Un), 120\% In

Short duration overload (1 s) voltage input 2 Un (< 1000 V), current input 10 In

### 7.4. Technical Data of N 24 H and N 25 H Meters

Measuring range:
INPUTS:
Measuring range of unipolar voltage Un:
$\left.\begin{array}{l}\underline{0 . . .100} \ldots 110 \mathrm{~V} \text { d.c. } \\ \underline{0 . . .250 \ldots 275 \mathrm{~V} \text { d.c. }} \quad\end{array}\right\}$ input resistance $>2 \mathrm{M} \Omega$

Measuring range of bipolar voltage Un:
$\left.\begin{array}{l}-120 \ldots-100 \ldots 100 \ldots 120 \mathrm{~V} \text { d.c. } \\ -300 \ldots-250 \ldots 250 \ldots 300 \mathrm{~V} \text { d.c. } \\ -600 \ldots-400 \ldots 400 \ldots 600 \mathrm{~V} \text { d.c. }\end{array}\right\}$ input resistance $>2 \mathrm{M} \Omega$

Measuring range of bipolar current In:
-1.2...-1...1...1.2 A d.c.
input resistance $10 \mathrm{~m} \Omega \pm 10 \%$
-6...-5...5... 6 A d.c.
input resistance $2 \mathrm{~m} \Omega \pm 10 \%$

## Basic error

(at manufacturer's settings):

- voltage and current:

| Sustained overload: | $150 \%$ Un (only for $\pm 400 \mathrm{~V}$ input), |
| :--- | :--- |
|  | $120 \%$ Un (for other Un), |
|  | $120 \%$ In |

Short duration overload (1s) voltage input 2 Un (<1000 V) current input 10 In

### 7.5. Common Technical Data for the Whole N24 and N25 Series

## Rated operating conditions:

- supply voltage
- ambient temperature
- storage temperature
- humidity
- work position
$230 \mathrm{~V} \pm 10 \%$ a.c. (45... 65 Hz )
$110 \mathrm{~V} \pm 10 \%$ a.c. $(45 \ldots 65 \mathrm{~Hz})$
$24 \mathrm{~V} \pm 10 \%$ a.c. (45... 65 Hz )
$85 \ldots 253 \mathrm{~V}$ a.c. $(45 \ldots 65 \mathrm{~Hz})$ or d.c.
20... 40 V a.c. ( $45 . .65 \mathrm{~Hz}$ ) or d.c.
$-10 \ldots . .23 . .55^{\circ} \mathrm{C}$
$-25 \ldots+85^{\circ} \mathrm{C}$
< 95\% (condensation inadmissible) any

Additional errors in rated operating conditions:

- from ambient temperature changes ( $50 \%$ of basic error/10 K)

Averaging time (programmable) $\geq 0.5 \mathrm{~s}$ (by default 1 s )
Preheating time
Readout field:

- digit height
- colour
- indication range:

4-digit LED display (N24 series)
5-digit LED display (N25 series)
20 mm (N24)/14 mm (N25 series)
red
-1999... 9999 (N24 series)
-19999... 99999 (N25 series)

Ensured protection grade from the frontal side:

Overall dimensions:
Weight:
Input power
Galvanic isolation between:

- supply-measuring input

## Electromagnetic compatibility:

- noise immunity
- noise emission

IP 65 acc. to EN 60529
$96 \times 48 \times 64 \mathrm{~mm}$ (with terminals)
$<0.25 \mathrm{~kg}$
< 6 VA
3.2 kV d.c.

## Safety requirements acc. to EN 61010-1:

- isolation between circuits: basic,
- installation category III (for the 400 V option - category II),
- pollution grade: 2 ,

- maximal phase-to-earth working voltage:
- for the supply circuit: 300 V ,
- for the measuring input 600 V - category II (300 V - cat. III)
- for the programming input: 50 V
- altitude above sea level: < 2000 m ,

Codes of printed units
Table 9

| Code | Unit | Code | Unit |
| :---: | :---: | :---: | :---: |
| $\mathbf{0 0}$ | without unit | $\mathbf{0 8}$ | kV |
| $\mathbf{0 1}$ | ${ }^{\circ} \mathrm{C}$ | $\mathbf{0 9}$ | Hz |
| $\mathbf{0 2}$ | $\%$ | 10 | turns |
| $\mathbf{0 3}$ | A | $\mathbf{1 1}$ | rpm |
| $\mathbf{0 4}$ | V | $\mathbf{1 2}$ | bar |
| $\mathbf{0 5}$ | mV | $\mathbf{1 3}$ | kPa |
| $\mathbf{0 6}$ | mA | $\mathbf{1 4}$ | MPa |
| $\mathbf{0 7}$ | kA | $\mathbf{X X}$ | on order ${ }^{11}$ |

${ }^{1)}$ - After agreeing with the manufacturer.

## EXAMPLES OF ORDER:

## Example 1

The code: N24Z-2 10400 E 0 means:
N24Z - digital meter with four digits for a.c. signals,
2 - input signal: 250 V a.c. (acc. to the table 8 ),
1 - supply voltage: 230 V a.c.,
04 - with the unit: $V$ (acc. to the table 9 ),
00 - standard version,
E - English language,
0 - without extra quality inspection requirements.

## Example 2 (custom-made version)

The code: N25S - 1402 XX E 1 means:
N25S - digital meter with 5 digits for d.c. signals
1 - input signal: $0 \ldots 20 \mathrm{~mA}$ (acc. to the table 8),
4 - supply voltage: $85 \ldots 253 \mathrm{~V}$ a.c., with the $24 \mathrm{~V} / 30 \mathrm{~mA}$ supply input for external transducers,
02 - with the unit: \% (acc. to the table 9), with display indications: 0...100.0,

XX - custom-made, mentioned in the table 10,
E - English language,
1 - with an extra quality inspection certificate.

Example of additional information for non-standard settings Table 10

| Parameter | Range/value |
| :--- | :---: |
| Decimal point | 000.00 |
| Averaging time | 1 s |
| Upper measurement overflow | 99999 |
| Lower measurement overflow | -19999 |
| Individual characteristic | enabled |
| Parameter $\boldsymbol{a}$ of the individual characteristic | 5 |
| Parameter $\boldsymbol{b}$ of the individual characteristic | 0 |
